

Brianna Damadian, MD, MS. Director of Clinical Research at FONAR Corporation. Dr. Damadian earned her Master of Science in Biology from New York University and her Medical Doctorate from SUNY at Buffalo Jacobs School of Medicine and Biomedical Sciences. She initially began studying disorders of the cerebrospinal fluid at New York University, where her research efforts focused on normal pressure hydrocephalus. Currently, Dr. Damadian, Dr. Raymond Damadian (her grandfather), and their team at FONAR Corporation are studying the physiologic and pathologic flow of cerebrospinal fluid as it relates to different body postures using Upright MRI technology. She will give a speech on **“The Influence of Body Position on Cerebrospinal Fluid Circulation”**.
