

David Chu, Ph.D.

Chief Scientist for Advanced Applications at FONAR Corporation in New York.

Dr. Chu has worked in multiple scientific and product development areas including pulse sequence development, clinical applications with emphasis on posture dependence, and system engineering. Dr. Chu earned his Ph.D. degree in Physics from UCLA and subsequently received advanced MRI training at the University of Chicago Hospitals, contributing to research publications in functional MRI and cerebrospinal fluid imaging. David also volunteers for organizations such as the NIH Center for Scientific Reviews, New York Cares and the Habitat for Humanity.

Speech Title: The Influence of Body Position on Cerebrospinal Fluid Circulation.
